ABSTRACT:

ABSTRACT OF THE DISCLOSURE

An injection syringe of the present invention comprises a hollow barrel, a needle seat and a plunger. The top of hollow barrel comprises an axial extension which has an upper channel and a lower channel for forming a positioning spring and a seal spring, ~~and the~~ The inside of the barrel where it is coupled to plane ~~which the conjunction connects between the barrel and~~ the axial extension has at least one piercing element ~~piereer~~. The needle seat is placed in the hollow barrel, and bottom radius of a body of the needle seat is larger than the top ~~one~~ of the body for tightly fastening with the seal spring. ~~And, the~~ The top of needle seat has a needle head seat which includes ~~deposits~~ a plurality of positioning sheets thereon ~~at the outside of it,~~ and the needle seat is positioned ~~on~~ inside the axial extension by a channel of the needle head seat.
